

## 采油用表活类驱油剂

Surface active oil displacement agents for oil extraction

### 产品概述

本品外观一般呈无色至淡黄色的可自由流动的统一液体。

采油用表活类驱油剂是一类具有两亲结构的化学物质,通常由亲水基和疏水基（也称亲油基）两部分组成,亲水基一般由长链烃基构成,主要以碳氢基团为主,亲油基是带电的离子基团和不带电的极性基团。这种结构使得表面活性剂能够在油水界面上吸附,降低油水界面张力,从而改善驱油效果。

### 性能特点

- 可有效降低油/水界面张力,提高洗油效率;
- 能够适应高温高盐环境;
- 可有效提高原油采收率;
- 具备多种应用方式,使用安全方便;
- 具有生物降解、不含有机溶剂,产品安全环保。

### Product Overview

This product generally appears as a colorless to pale yellow, freely flowing, uniform liquid.

Surface active displacement agents for oil extraction are a class of chemical substances with amphiphilic structures, usually composed of hydrophilic and hydrophobic groups (also known as oleophilic groups). Hydrophilic groups are generally composed of long-chain hydrocarbon groups, mainly consisting of hydrocarbon groups, while oleophilic groups are charged ionic groups and uncharged polar groups. This structure enables surfactants to adsorb at the oil-water interface, reducing interfacial tension and improving oil displacement efficiency.

### Characteristics

- It can effectively reduce the interfacial tension between oil and water and improve the efficiency of oil washing;
- Capable of adapting to high temperature and high salt environments;
- Can effectively improve crude oil recovery rate;
- Having multiple application modes, safe and convenient to use;
- It is biodegradable, free of organic solvents, and the product is safe and environmentally friendly.
